Haematology & Oncology – Section Summary

Haemolysis • Transfusion • HIT • TTP • TLS • Sickle cell • Acquired haemophilia

Critical Care Board Review • Section 24 • MCQ-Oriented

1. Key Points

- Oxidant haemolysis, bite cells → **G6PD deficiency**; Heinz bodies = **denatured haemoglobin**
- Fever during transfusion → **stop transfusion**
- Massive transfusion without bleeding issues → do nothing extra
- TLS (SCLC/bulky) → **rasburicase**
- Acute chest syndrome → **exchange transfusion**; long-term **hydroxyurea**
- HIT confirmation → **serotonin release assay**; monitor platelets q2–3 d days 4–14
- Linezolid/MRSA + MAHA → **TTP** → **plasma exchange**
- TA-GVHD prevention → **irradiation**
- MPN: MI and stroke commonest thrombotic events
- Postpartum bleeding, isolated ↑ aPTT → **acquired factor VIII inhibitor**

2. High-Yield MCQ Pearls

- [x] Fever on transfusion → stop
- [x] HIT → SRA confirms
