Obstetrics – Section Summary

Hyperemesis • Pre-eclampsia/HELLP • Liver • AFE • PPH • Peripartum

Critical Care Board Review • Section 26 • MCQ-Oriented

1. Key Points

- Hyperemesis + confusion → **Wernicke** (thiamine)
- HELLP/preterm → **dexamethasone/betamethasone** then **delivery**
- Definitive treatment for pre-eclampsia/AFLP → **delivery**
- Autoimmune hepatitis: continue **steroids/azathioprine** in pregnancy
- Budd–Chiari in pregnancy → **TIPS**
- OHSS (IVF) → supportive
- Eclampsia: Mg first; status → **lorazepam 2 mg IV**
- Postpartum headache + seizures → **cerebral venous thrombosis**
- AFE = immunologic (anaphylactoid) response to fetal material
- Retained products → **D&C**; previa on US; atony → **carboprost**
- Peripartum cardiomyopathy: **prolactin** pathway (bromocriptine)

2. High-Yield MCQ Pearls

- [x] Pre-eclampsia cure = delivery
- [x] Atony → carboprost (avoid in asthma)

1. Key Points
