Critical Care Ultrasound – Section Summary

Pleura • Lung • Shock • Abdomen • Vascular

Critical Care Board Review • Section 32 • MCQ-Oriented

1. Key Points

- Septated/echogenic → **complex effusion** → drain + tPA/DNase
- **Lung sliding** rules out pneumothorax at that point
- Dilated RV after recent procedure → **massive PE**
- Free fluid + falling Hb → **haemoperitoneum**
- Effusion + collapse → **pericardiocentesis**
- Bilateral B-lines → **pulmonary oedema**; A-lines + wheeze → obstructive airways
- Hepatisation + effusion → **consolidation**
- DVT in HIT → **argatroban**

2. High-Yield MCQ Pearls

- [x] Sliding excludes PTX
- [x] Diffuse B-lines = oedema

1. Key Points

- Septated/echogenic → **complex effusion** → drain + tPA/DNase
- **Lung sliding** rules out pneumothorax at that point
- Dilated RV after recent procedure → **massive PE**
- Free fluid + falling Hb → **haemoperitoneum**
